

PointzPlus

Every reward you've earned. One place. Actually usable.

Investor deck · Draft v1 · For founder alignment

Shishir Bharti · Luca Altomare · Manish Jha

Two markers run through this deck

This is a draft, not a finished pitch. Half of it is written. Half of it is the work we still have to do.

DRAFTED

Written from what we already have. Argue with it — don't accept it because it's on a slide.

OPEN

We haven't decided this, or I don't have the facts. This is the real work.

**Every open question here is a question an investor will ask.
If we can't answer it to each other, we can't answer it to them.**

Vision

A world where the rewards you've earned work like money — visible, comparable, and spendable anywhere.

Today loyalty points are the opposite of money. You can't see them all. You can't compare them. Most of them quietly die.

OPEN — FOUNDERS MUST DECIDE

- Would a competitor's vision read differently? If not, it's wallpaper.
- Does this tell us what to say no to next Tuesday?
- Write your own one-line version before reading mine. Then compare all three.

Mission

Turn fragmented, forgotten loyalty value into money people can actually use.

The vision is where we're going. The mission is what gets built next sprint.

AND WHAT WE SHOULD NOT BECOME

- A coupon site
- A cashback clone
- A dashboard people open three times and abandon
- A white-label vendor with no brand of our own

OPEN — FOUNDERS MUST DECIDE

- Does this mission describe something an engineer builds, or is it a slogan?
- Which of the four “not” statements would actually cost us something to honour?

Loyalty points are money that behaves like nothing

People earn rewards across a dozen programs. Cards, airlines, hotels, shopping, fuel, food. Three things go wrong.

You can't see it

Points sit in a dozen apps and inboxes.
Nobody keeps a running total.

You can't compare it

5,000 of one thing versus 200 of another. Which is worth more?
Nobody knows.

You lose it

Points expire on clocks you can't see.

And the uncomfortable part: the industry is fine with this. Expired points are revenue. Confusion is the business model.

OPEN — FOUNDERS MUST DECIDE

- What share of points actually expire? We need a real number, not a claim.
- Do we have anything from real users — even ten conversations? Right now this is our belief, not evidence.
- If it's this obvious, why has nobody won it? Name who tried and what killed them.

Why now

1

Programs keep multiplying

Attention doesn't. The gap widens every year.

2

Data is finally reachable

Brands are opening APIs. Aggregation rails have matured.

3

AI can answer the real question

“What's the best way to pay for this?” wasn't answerable before.

4

Reward budgets are squeezed

Margin pressure on the brand side creates a buyer.

OPEN — FOUNDERS MUST DECIDE

- Which of these four is genuinely new, and which are we saying because it sounds like a good “why now”? An investor will pick the weakest one and push on it.

One app. Four jobs.

See

Every program, one balance

Protect

Warn before points expire

Decide

Which card, offer and reward gives the most value on this purchase

Use

Get the value out

The MVP does See and Protect today. Decide is where the real product is.

OPEN — FOUNDERS MUST DECIDE

- Which one is the headline? Only one can be. See and Protect make a dashboard — and dashboards get opened three times and abandoned. Decide is a behaviour.
- What's honestly built versus mocked right now?

From inbox today to brand APIs tomorrow

TODAY

We scan your inbox, read the loyalty statements, and build your wallet automatically. No manual entry.

WHERE WE'RE GOING

Direct API integration with brands — top 50 in India, then global.

Email scanning is a demo mechanism. APIs are the destination. The gap between them is the whole business risk.

OPEN — FOUNDERS MUST DECIDE

- Brands give API access to platforms with users. We have no users. What do we offer brand number one?
- Realistic integration rate — two a quarter, or ten?
- Coverage: what share of a typical user's points sits inside the top 50 Indian programs? At 80% this works. At 40% the wallet looks empty and the product fails on day one.
- Does “global too” mean now or later? Both at three people means neither.

Who we serve first

Indian professionals holding three or more credit cards, who travel, and who already know they're leaving value on the table.

They hold the most programs, carry the most expiry risk, and gain most from a “which card should I use” answer.

OPEN — FOUNDERS MUST DECIDE

- Is that the beachhead, or just the person most like us?
- Why them — strongest pain, fastest to pay, best data, or best distribution? Only one can be the reason.
- The counter-argument worth taking seriously: the person with the most programs may also be the most sophisticated, and the least in need of help.

Two engines, and one hard choice

CONSUMER · Shishir

Own the relationship. Be the place people check before they buy.

BUSINESS · Luca

Brands, merchants, banks and card issuers. Reach, distribution, and intelligence on what rewards actually work.

The bet is that each side makes the other stronger.

OPEN — FOUNDERS MUST DECIDE

- Which comes first in the next 12 months? Not “both”.
- B2C first means spending on acquisition before we have revenue.
- B2B first means 9–18 month sales cycles and near-zero revenue for a year.
- We have zero business-side conversations started today. That's not a gap in the deck — it's a gap in the company.

How we make money

CONSUMER SIDE

- Subscription
- Affiliate and commission
- Merchant-funded offers
- Sponsored placement
- Premium AI features

BUSINESS SIDE

- SaaS licence
- API access
- Transaction fees
- Revenue share
- Campaign fees

None of this is decided. That is the point of the next question.

OPEN — FOUNDERS MUST DECIDE

- Rank them: Now / Next / Later / Never.
- Who pays us first — a person or a company? And roughly when?
- Subscription is one option, not the default. It only works if people open the app often. Do they?
- The honest version: if a user costs more to get than we make from them under every model we can name, the consumer app is a distribution strategy for a B2B business. That's a legitimate answer — better said now than found in year two.

THE PART EVERYONE ASKS ABOUT

Where AI actually plugs in

Not “we use AI”. Four specific places, and one decision we have to make.

Four places, not a buzzword

1 · THE CONCIERGE — THIS IS THE PRODUCT

“I'm buying a ₹50,000 TV. Which card, merchant, offer and reward combination gives me the most value?”

Card benefits, live offers, your balances, merchant pricing, redemption values, expiry timing — resolved into one answer in seconds. Nobody can do this by hand. That's the point.

2 · Making sense of messy data

Loyalty data arrives as unstructured email with no standards. Reading it reliably at scale is an AI problem, not a parsing problem.

3 · Knowing when to nudge

Which points are at risk, when someone is about to buy, what they'd actually want.

4 · Merchant intelligence

Who to target, what reward to offer, when, which incentive converts, who is about to churn.

If we removed AI, would this still be the same company?

- 1 AI makes our product better** Everyone has this. No moat.
- 2 AI lets us build what we otherwise couldn't** Our wedge. The moat is the data, not the model.
- 3 We become the intelligence layer between people and rewards** Different company. Different hires, different investors.
- 4 Without AI there is no company** Highest ceiling. Highest capital need. Highest risk.

OPEN — FOUNDERS MUST DECIDE

- Each of us picks a level, privately, then reveals. If we pick different numbers, that is the biggest disagreement we have — and everything downstream inherits it.
- What is defensible once the models are a commodity? If the honest answer is “nothing”, our moat is data and habit, not AI.

What we'd still have if someone copied us

Data that compounds

Every purchase teaches us what a point is really worth. Gets better with time. Can't be bought.

Habit

If we're the check-before-you-buy app, we're hard to remove.

Brand integrations

Fifty API relationships are slow to build — which is exactly why they're slow to copy.

Redemption liquidity

The more ways to use points, the more reason to stay.

Trust

We handle financial data. Slow to earn, instant to lose.

OPEN — FOUNDERS MUST DECIDE

- Why can't a bank build this? They have the data and the customer.
- Why can't Google, Apple or Amazon? They have distribution and payments.
- Why can't an existing loyalty platform? They have the merchant relationships.
- Then pick ONE primary moat. A deck claiming five moats is claiming none.

Competition

I have nothing here and won't invent it. This is the slide investors use to test whether we actually know our market.

Loyalty aggregators

Cashback apps

Rewards platforms

Offers and deals

Fintech and money apps

B2B loyalty vendors

OPEN — FOUNDERS MUST DECIDE

- For each category: who plays here, what they do better than us, and where the gap is.
- Founder input required — this one can't be written by anyone but us.

Seven versions of us. We have to pick.

1 A loyalty aggregation app

2 A consumer rewards platform

3 B2B loyalty infrastructure

4 A B2B2C rewards ecosystem

5 An AI rewards intelligence platform

6 A global rewards currency

7 Some sequence of the above

My read, for you to attack: 5 and 6 aren't starting points. They're what you earn by doing 2 or 3 well. The question isn't which one — it's which one first, and what that buys us.

OPEN — FOUNDERS MUST DECIDE

- Which one can three people actually start this year?
- Which has a customer who'll pay within six months?
- Which are we drawn to because it's right, versus because it sounds impressive?

The long game: PointzPlus Coin

One currency. Earn anywhere, spend anywhere. Points stop being a brand's liability and start being value people can move.

Long-term hypothesis. Not a roadmap item. Be honest about this one.

OPEN — FOUNDERS MUST DECIDE

- Points on a brand's balance sheet are a liability they control. A coin hands that control to us. What do they get that's worth it?
- Cross-brand currencies are one of the hardest businesses in fintech, with a long list of well-funded failures.
- Stored-value and e-money rules differ by market. What licence would this need?
- Decide: in the 24-month plan, a stated ambition we describe but don't build, or cut from the story.

The useful version may be “become the exchange rate”, not “become the currency”. Is that a downgrade — or is that the actual insight?

Market

Every number on this slide must be real. A wrong figure here ends the meeting.

Loyalty program memberships per person in India

?

Value of points issued annually

?

Value that expires unused each year

?

How many people match our beachhead description

?

OPEN — FOUNDERS MUST DECIDE

- Founder input required. I will not put an invented number on a slide.

Where we are

- MVP built — login, automatic discovery from email, consolidated wallet, category and brand views, expiry alerts.
- Around 24 Indian loyalty programs across 12 categories mapped.
- No users. No revenue. No brand conversations started.
- Three founders. Roles split and agreed.

This deck is vision-forward, so this slide sits here. When we actually raise, it moves to slide four — because that's where they'll ask.

OPEN — FOUNDERS MUST DECIDE

- What's genuinely working versus mocked?
- Has anyone outside the three of us used it? What did they say?
- Are any of us full-time? Real hours per week, each.

What we prove next

NEXT 6 MONTHS

What makes us believe people come back?

One metric. Retention, not signups.

6 – 12 MONTHS

What proves we can grow without buying every user?

12 – 24 MONTHS

What turns this into a platform rather than an app?

OPEN — FOUNDERS MUST DECIDE

- The kill criterion. What result would make us stop and rethink? Write it now, while we can still be honest about it.

Team

Shishir Bharti

Consumer, growth, go-to-market

Luca Altomare

Business side, partnerships, brands
and banks

Manish Jha

Product and growth

OPEN — FOUNDERS MUST DECIDE

- What's the “why us” line? Investors buy unfair advantage, not job titles. What do the three of us know or have that a random team doesn't?
- What role are we missing right now, and who covers it until we hire?

Why invest

Real money is going to waste

Loyalty value expires at scale because nobody can see it. Measurable, not a nice-to-have.

The timing works

APIs are opening. AI can finally answer the question that matters. Neither was true five years ago.

India first is an advantage

Dense programs, high card usage, a market global players build for late.

Two engines

Consumers give us data and reach. Businesses give us revenue. Each makes the other stronger.

The data compounds

Knowing what a point is actually worth gets better with every user — and can't be bought.

OPEN — FOUNDERS MUST DECIDE

- What do we want to be true 24 months from now, in numbers?
- What would that cost, and what does the money buy — runway, team, integrations, or distribution?

What we will not do

Investors trust founders who've said no to something specific. If saying no costs us nothing, it isn't a real no.

1

2

3

OPEN — FOUNDERS MUST DECIDE

- Three answers. They should sting a little.

EVERYTHING ABOVE, IN ONE LIST

The questions we owe each other

26 open items. This is the offsite agenda.

Story, customer and product

STORY

- The one-liner
- The vision, in words all three of us would repeat
- Why nobody has won this yet

CUSTOMER

- Beachhead — named specifically
- Why them: pain, payment, data or distribution
- B2C or B2B first — pick one

PRODUCT

- Which of see / protect / decide / use is the headline
- What's built versus mocked
- What we offer brand number one, with no users
- Coverage: what share of points sit in the top 50
- India-only integrations year one, or global too

OPEN QUESTIONS

Money, AI, moat and company

MONEY

- Revenue streams ranked Now / Next / Later / Never
- Who pays first, and when
- Does the consumer app pay for itself, or feed the B2B business

AI

- Our level — 1, 2, 3 or 4
- What's defensible when models are commodity

MOAT

- Why can't a bank, a big tech, or an incumbent build it
- Our one primary moat

COMPANY

- Which of the seven companies we're building, and in what order
- The Coin: in, mentioned, or cut

OPEN QUESTIONS

Facts I need, and discipline

FACTS I DON'T HAVE

- Competitor list
- Market numbers
- Any user feedback at all
- Real hours per founder

DISCIPLINE

- Three things we will not do
- The kill criterion

My honest read: B2C-or-B2B, what we offer brand number one, our AI level, and which company we're building are the four that decide everything. The rest follow. If the offsite settles only those four, it was worth it.

PointzPlus

We're not asking anyone to believe this yet.

First the three of us have to believe the same thing.
